

Save Web Pictures

Have you ever been to a Web site where you see fabulous pictures that you just have to save and keep for yourself? Maybe you come across one that one of your friends would just adore. Is there a way to save that so you can share it with others? Of course there is!

Just go to the Web page where the picture is, right click on it and choose **Save Picture As**. This will then take you to the save box where you can choose the location you want to save the picture in. Make sure you choose a spot that you can get to easily and that you remember well. I would probably choose the My Pictures folder. Once you choose your location, click on **Save**. Here is a picture I liked, so I saved it!

The picture is now saved on your computer and you can send it to as many people as you want. If you want to attach it to an e-mail, you can do that. If you want to set it as your desktop wallpaper, you can even do that! You've now got a beautiful picture that you can share with the world. It's as simple as that.

Do keep in mind that certain Web sites won't allow you to save their pictures. They will let you know by a warning message, but just don't be too disappointed if that happens, because it can. Just go and find another wonderful photo that you can save!
