

Pin Control Panel to Taskbar

Do you find yourself accessing the Control Panel often throughout your day? Well, if you're using Windows 7, then you're in luck!

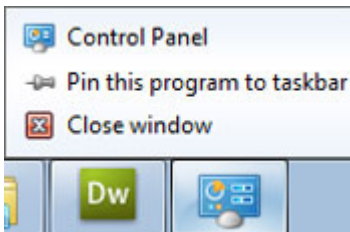

Click **Start** and then type in “**Control Panel**” in the search box...

...and drag the control panel icon down to your taskbar.

Alternately, go to **Start**, click **Control Panel** and then right-click the Control Panel icon in your Taskbar and select **Pin this program to taskbar**.

Now you can access the control panel whenever you want without all the mouse-travel!

If you ever want to get rid of it, just **right-click** and select “**Unpin this program from taskbar**”.
